

The Grey Street Band

Technical Requirements

Our requirements are pretty simple.

At the minimum – we need normal USA house power (110 volts, 60 cycles, on a 10-20 amp circuit), and a reasonably adequate space to set up – as small as 15x10 (150 square feet), and up from there.

PA – we have an excellent, self-contained PA that will cover a small to medium rooms quite well – up to about the space of an average hotel ballroom. For larger spaces (such as larger outdoor events), we can easily connect to larger PA systems.

LIGHTS – we have stage lighting, even “bells and whistles” such as fog effects!

SETUP TIME – Our minimum setup time is approximately 30 minutes, and our minimum teardown time is about the same.
